

TortoiseGit

Short instruction

21.10.2017

Prerequisite:

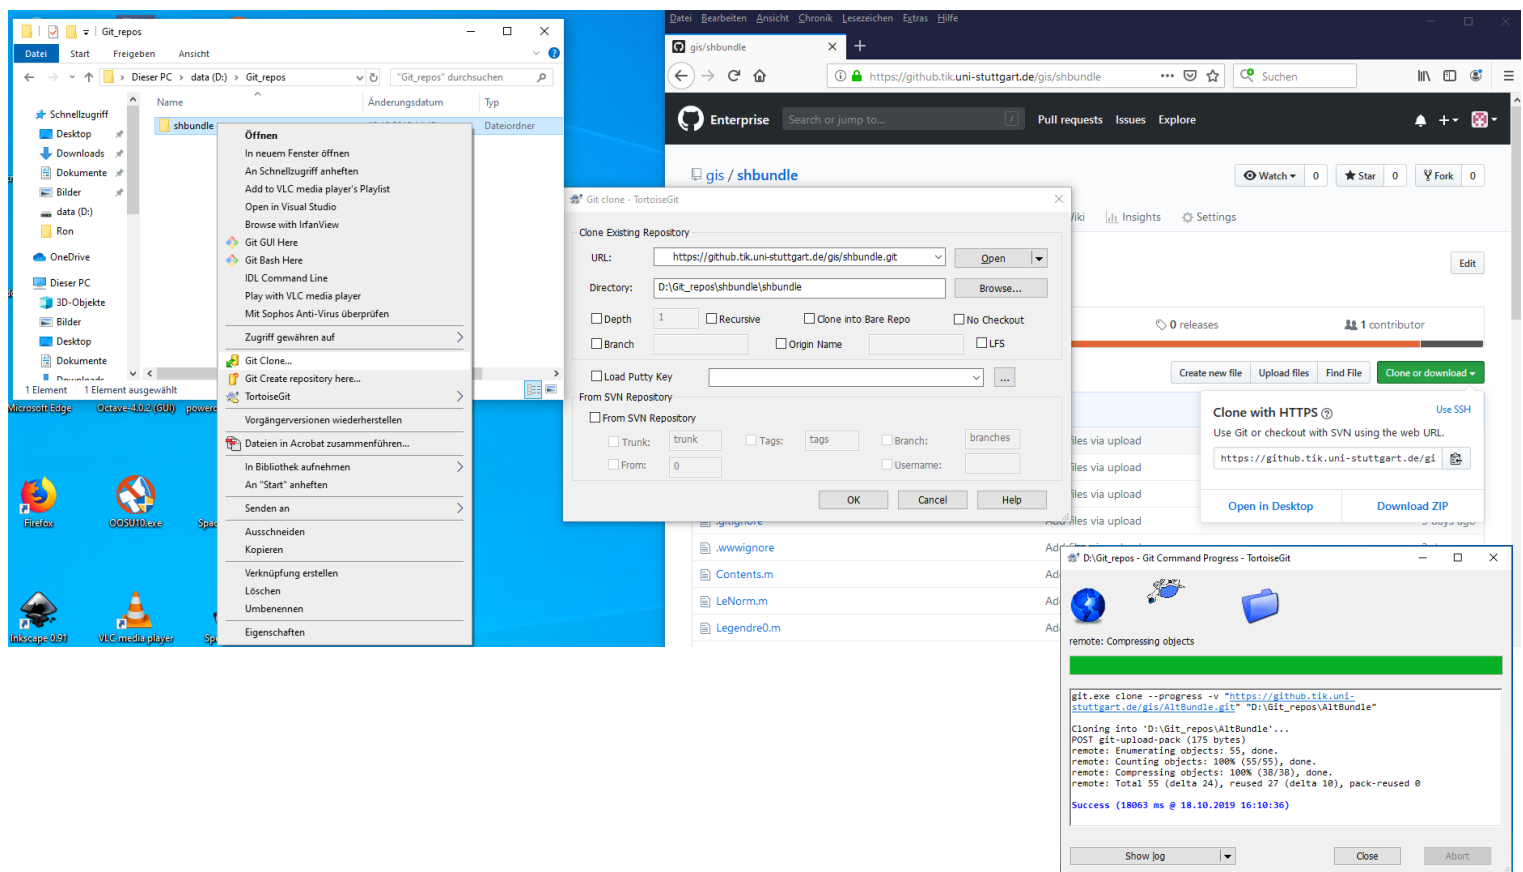

You are already member of <https://github.tik.uni-stuttgart.de/gis>

Please contact Ron if you are not member yet.

Step 1:

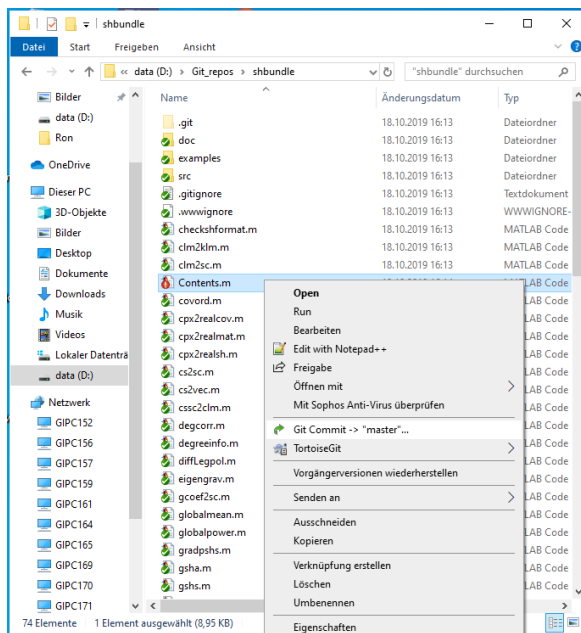

- Install Git-Client <https://git-scm.com/download/win> and
- Install TortoiseGit <https://tortoisegit.org/download/>

Step 2: Git Clone a repository

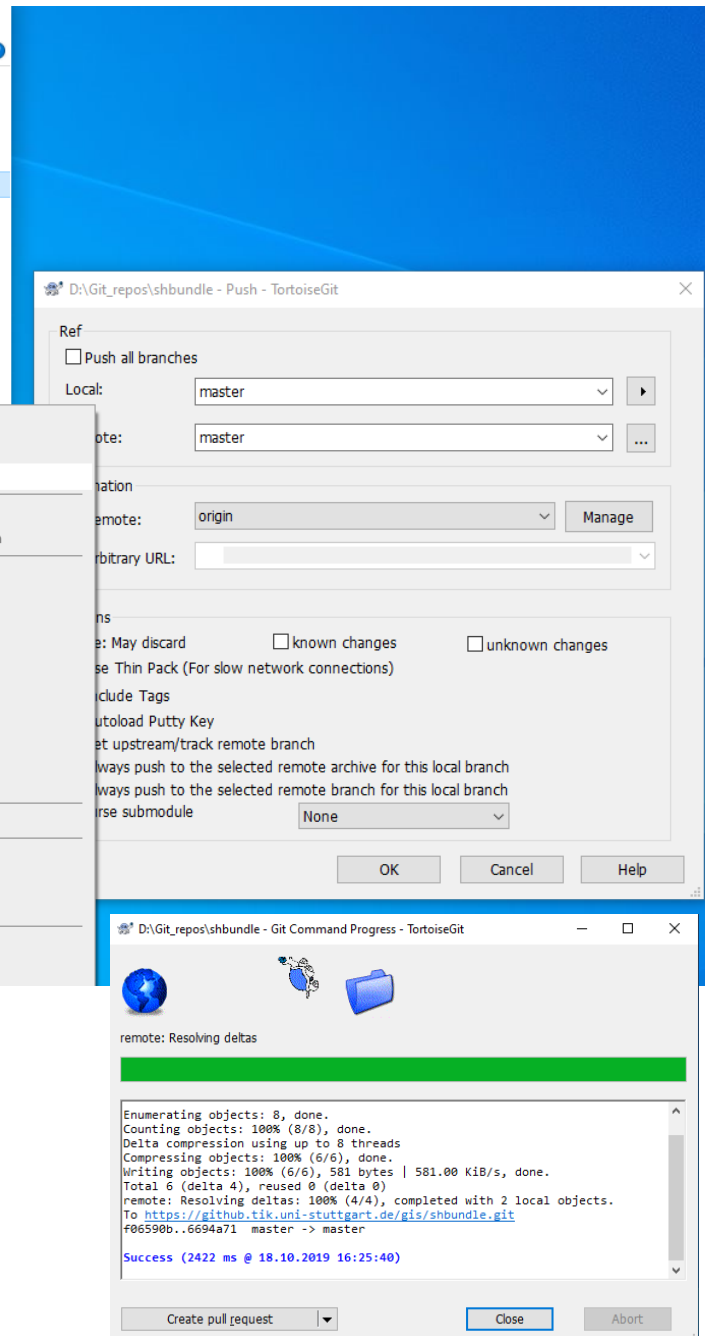

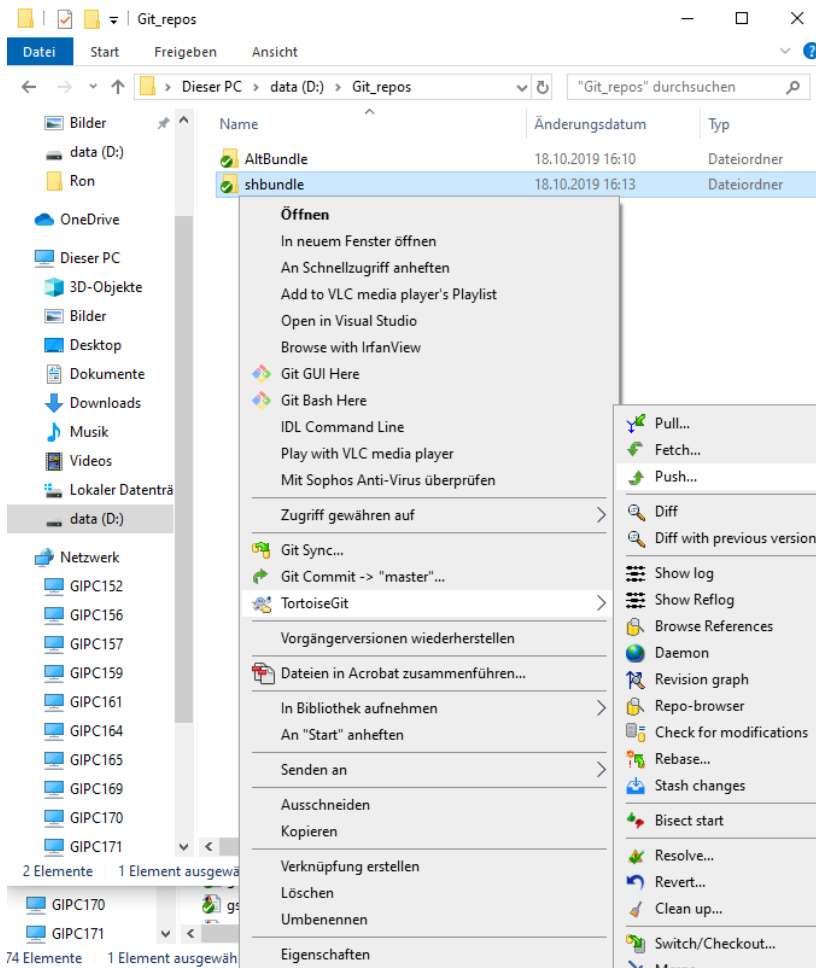

Code your programs and make changes

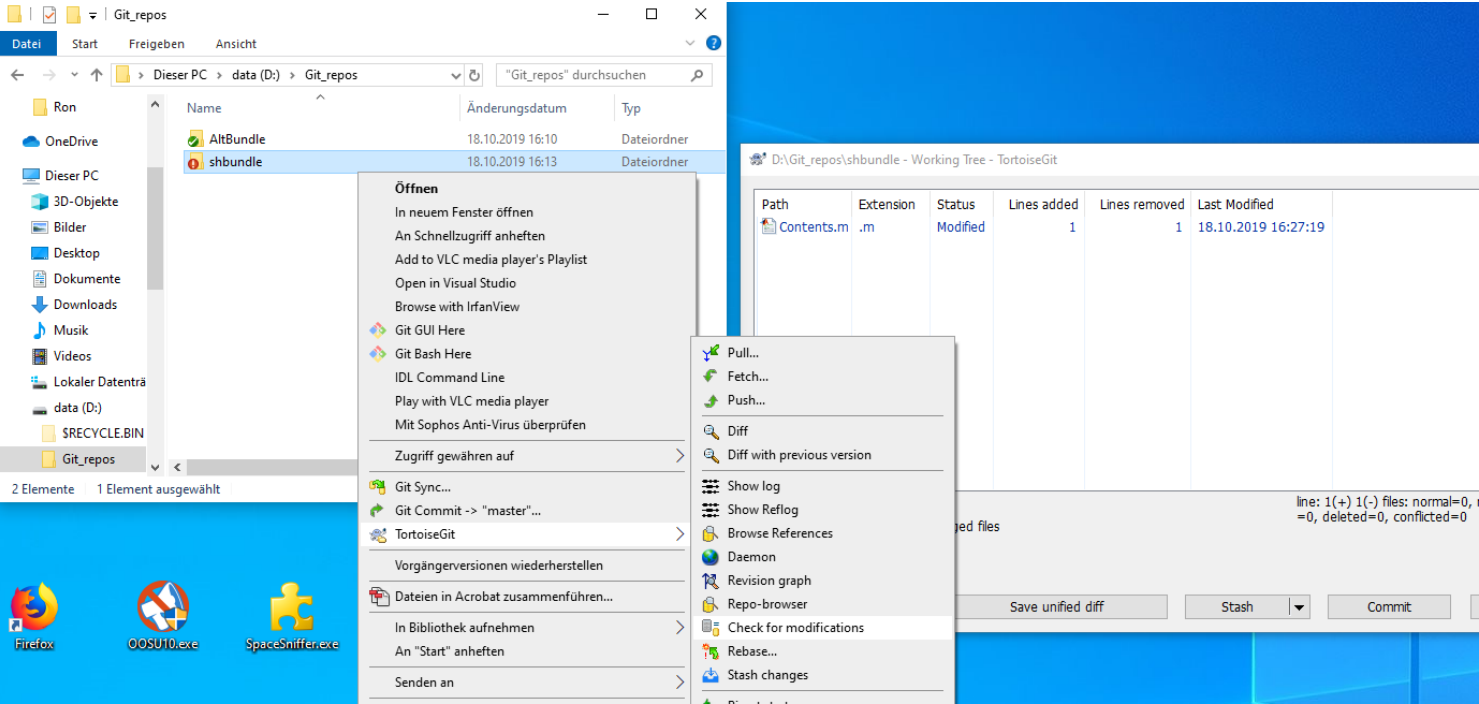

Commit (local working tree = on your PC) your changes - for documentation you always have to add a 'meaningful' comment:

Push (remote destination = github.tik-server):

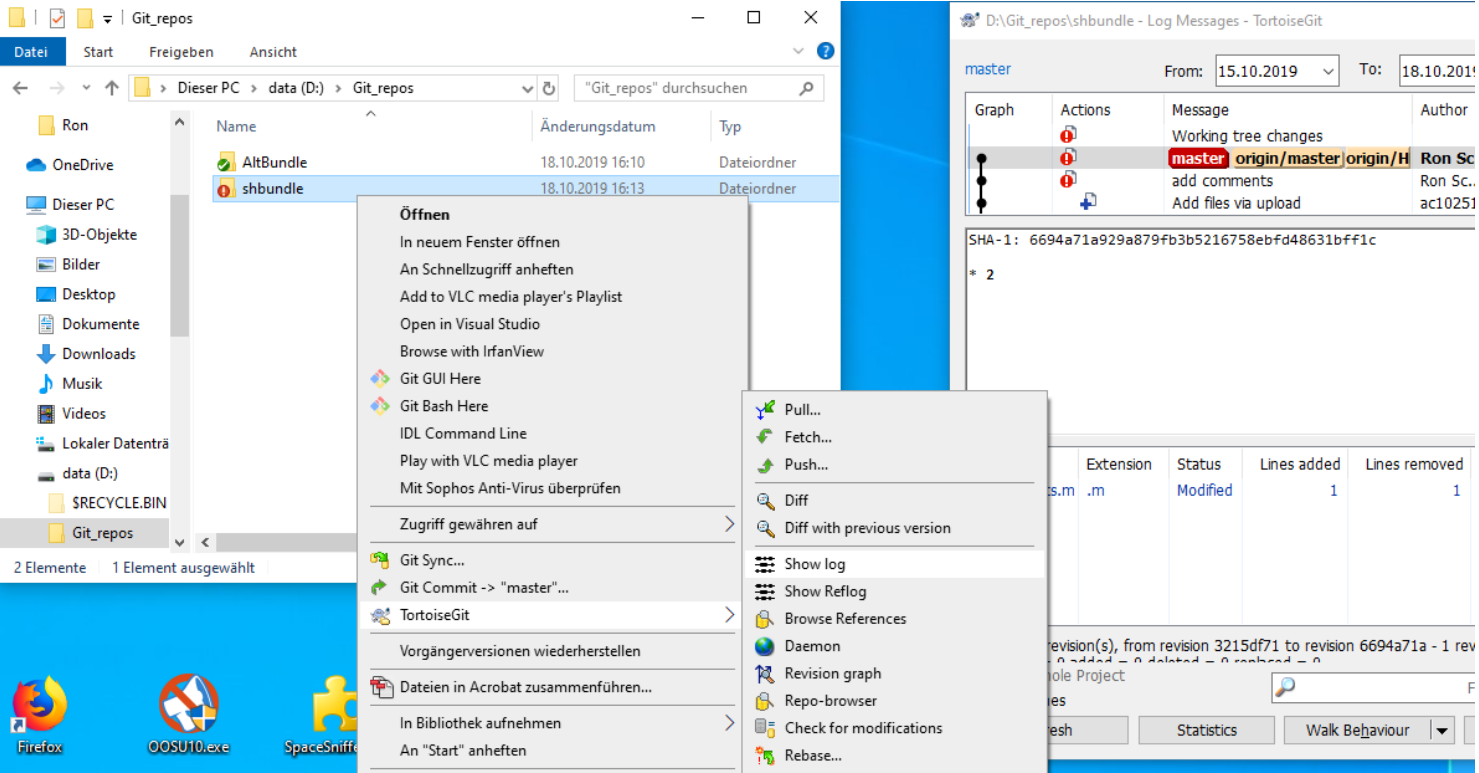

!Before you start again coding your files another day! -> 'Git Sync' or 'check for modifications' or see 'Diff'

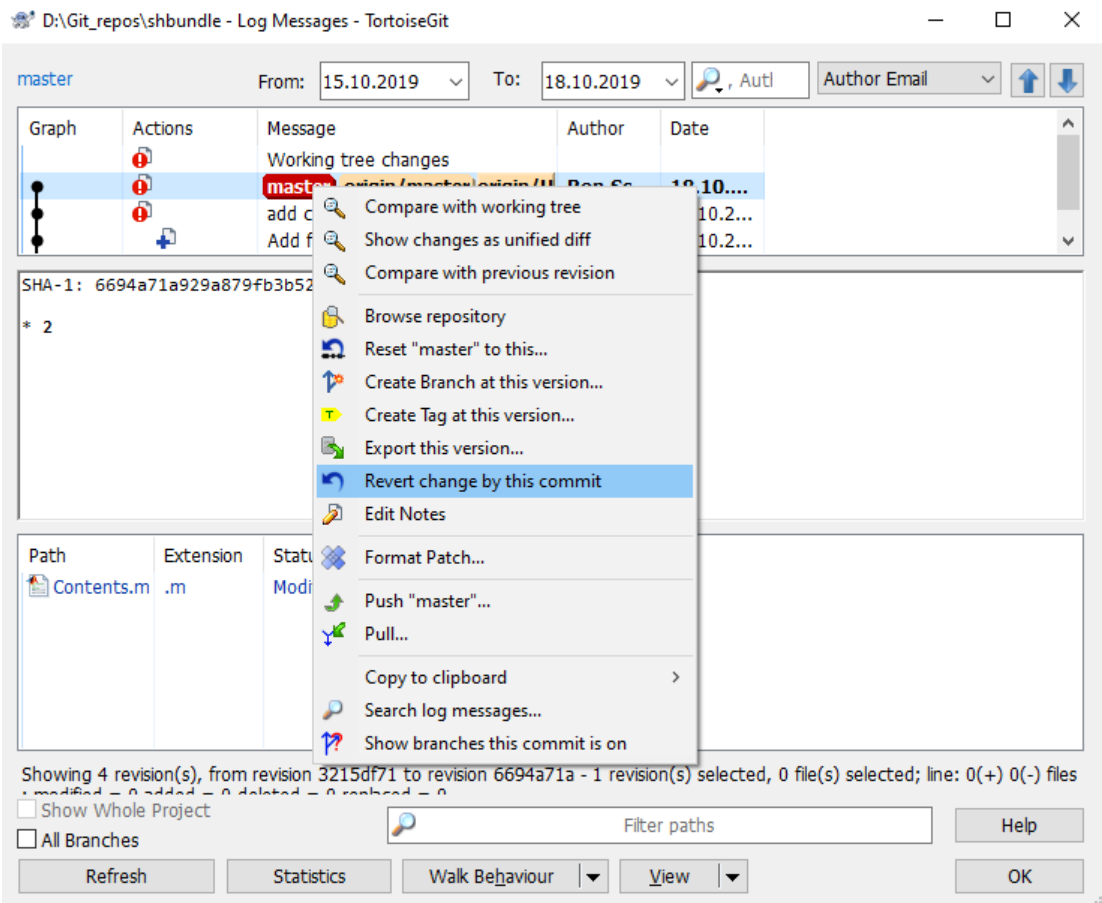

Hints if something goes wrong and was already committed or even pushed:

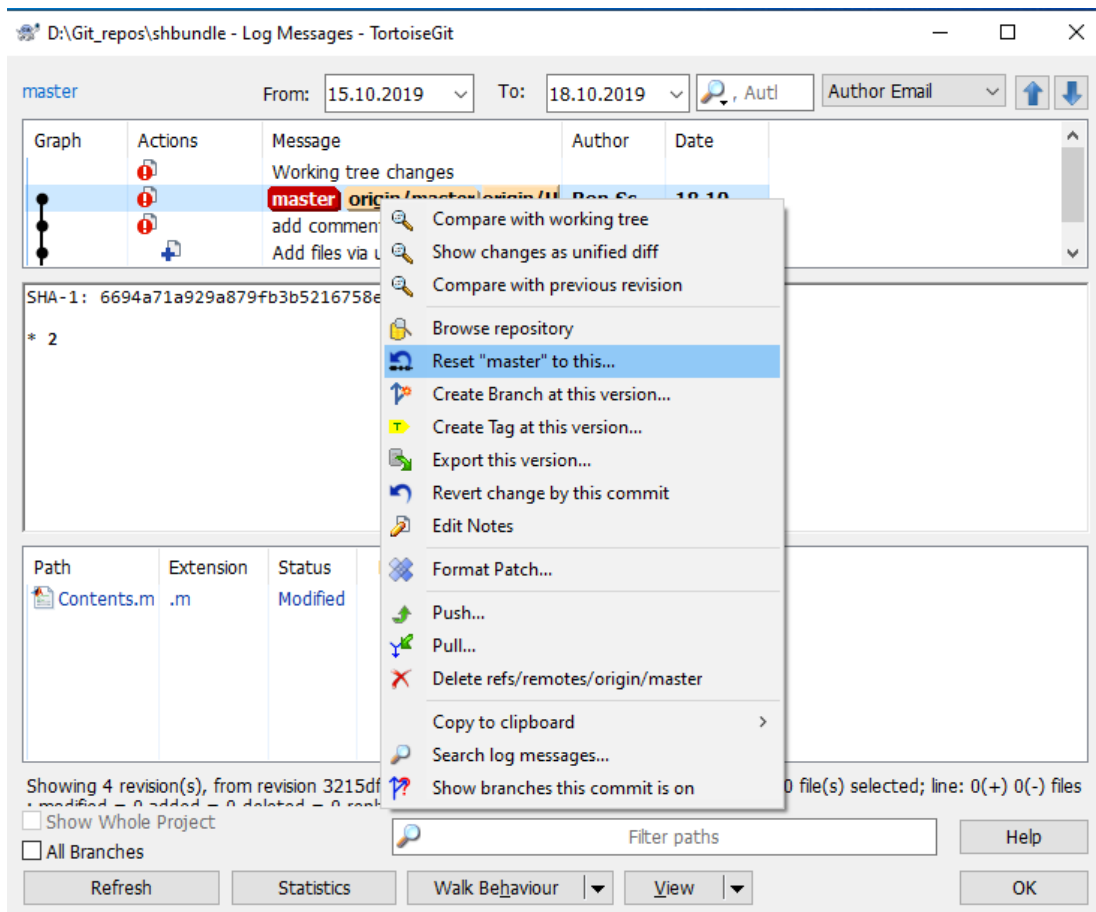

Show log

Revert (local working tree = on your PC) to a previous state

Reset master (remote destination = github.tik-server) to a previous state

Appendix

Credential Manager - Just in case you typed wrong username and/or password during the setup process:

Windows+R -> rundll32.exe keymgr.dll,KRShowKeyMgr
